

CHECK21 Transport Server

Accelerate Cost Savings and Operational Efficiencies

C21 Transport Server is fast, secure and automatic. It virtually eliminates all courier fees associated with sending daily work to the Federal Reserve, main office, or third party clearing house. Productivity soars as a result of processing throughout the day. No more end-of-the-day scramble to courier daily work to your clearing house!

Immediate Availability

Checks scanned with C21 Teller Capture and C21 Batch Capture are encrypted and transmitted to Transport Server – in real time! As soon as a check is scanned and accepted, the image is stored and instantly available for employee research, presentment and clearing.

Secure Transmission Encryption

Using sophisticated, high-level data encryption that follows stringent rules of transaction initiation and utilizing full firewall protection, C21 Transport Server ensures that electronic presentment occurs in the safest possible environment. C21 Transport Server assists in the prevention of fraud by ensuring the integrity and security of each transmission.

Complete Customization

Like all of our solutions, C21 Transport Server is specifically designed to meet your financial institution's clearing requirements. Regardless of your network environment, C21 Transport Server can be configured to support it. The ability to customize our software solutions makes a Bluepoint solution uniquely suited to your organization's document management needs.

Bluepoint Solutions is the premier provider of Check 21-compliant software products for financial institutions, including a completely customizable software solution that streamlines, fine-tunes and simplifies the process of transmitting check images to a central location for clearing. C21 Transport Server allows your institution to transmit daily work, in real-time, from your batch or teller C21 stations to Transport Server and from there to the Federal Reserve or third party clearing house. This means your institution can eliminate courier fees and realize significant per-item savings by making less frequent larger dollar amount transmissions. Look to an innovator and industry leader. Bluepoint Solutions was one of the first to offer Check 21-compliant, image-enabled, check processing software. Today, Bluepoint Solutions has one of the largest base of users, allowing the company to provide technologically advanced, leading-edge Check 21 solutions to financial institutions – large or small. We are undeniably setting the pace of innovation!

Central Workstation Administration & Maintenance

The C21 Transport Server includes a comprehensive administration tool that allows workstations to be configured and maintained from a single, central or remote location. This tool streamlines the administration of workstations, provides a superior level of control and creates a full audit trail.

Monitor Daily Activities

Utilizing Transport Server's dashboard feature, your Administrator has the ability to thoroughly monitor connectivity and teller activity. Users, batch control, items received, released, and posted, can be meticulously observed and analyzed, allowing your institution to make operational improvements and enhance productivity.

Comprehensive Research & Reporting Capabilities

C21 Transport Server provides a comprehensive method for monitoring your financial institution – from high-level activities, to precise details of each transaction. The research and reporting capabilities provide online views of your financial institution, a particular branch, workstation, or teller transaction.

CHECK21 Transport Server

Benefits

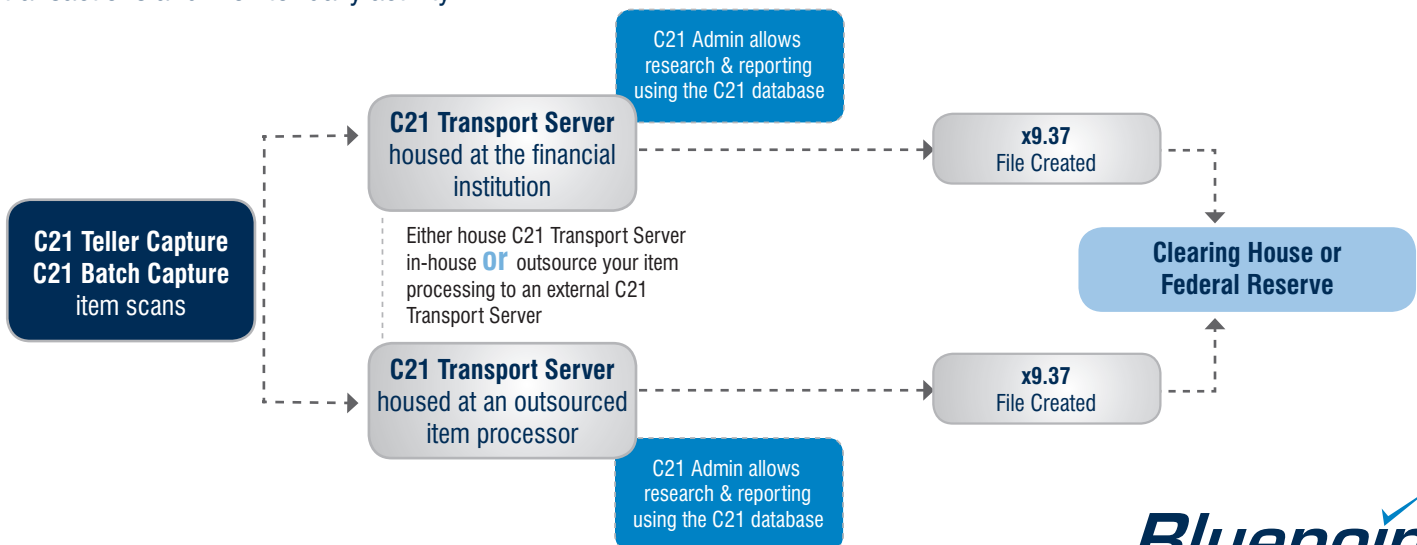

- Simplifies electronic check presentment and transmittal
- Allows your institution to realize significant per-item savings
- Improves operational efficiencies and reduces costs
- Eliminates courier fees associated with paper check transportation
- Eliminates end-of-the-day scramble to courier daily work to your clearing house
- Operates in real-time
- Allows complete customization to meet your institution's specific clearing requirements
- Provides a fast, secure method for the electronic delivery of daily work
- Ensures the integrity and security of each transmission
- Streamlines administration of workstations and provides greater control
- Creates a full audit trail

Features

- Releases items to the back office remittance processing system and creates x9.37 files for electronic delivery
- Automatically transfers daily work to the Federal Reserve, main office, or third party clearing house
- Transmits x9.37 files
- Meets all Check 21 clearing requirements
- Supports and conforms to any network environment
- Provides highly sophisticated transmission encryption
- Includes a robust administration tool that enables the configuration and maintenance of workstations from one central or remote location
- Monitors connectivity and teller activity to view logged-in users, items received, items released and items posted, plus batch control
- Provides powerful reporting and research capabilities
- Offers online views of activities of the financial institution, a particular branch, workstation, or teller transaction

how it works

C21 Transport Server accepts items captured at the teller or branch level, either directly or at the main branch. An x9.37 file is scheduled, created and transmitted to your clearing house. Through the user dashboard, you can research all transactions and monitor daily activity.
